SUMMARY

Computer Science student with hands-on experience in database management, front-end development, UI/UX design, and AI-based system development. Adept at building backend APIs, designing relational schemas, and creating responsive interfaces across collaborative team settings. Eager to apply a diverse technical skill set to database engineering, data-driven, or AI-focused roles.

EDUCATION

Polytechnic University of the Philippines

Aug 2023 - Present

Bachelor of Science in Computer Science

Anonas Street, Sta. Mesa, Manila Philippines.

Polytechnic University of the Philippines

2021 - 2023

Science, Technology, Engineering, and Mathematics

Anonas Street, Sta. Mesa, Manila Philippines.

PROFESSIONAL EXPERIENCE

ProjectEngage Inc. | IT Intern

Sep 2025 - Feb 2026

Bel-Air, Makati

- Designed and maintained database schemas for a real-time HR Information System, improving data accuracy, query performance, and scalability.
- Built responsive UI/IX interfaces and front-end components using ReactJS and Tailwind CSS in collaboration with a cross-functional team.
- Assisted in software quality assurance activities, documenting, and resolving bugs to ensure reliable feature delivery

AWS Cloud Clubs Philippines | Resource Allocation Officer

Jul 2024 - Jan 2026

- Coordinated distribution of AWS resources to AWSCC-affiliated universities nationwide, managing logistics and tracking allocation status across multiple student chapters.

PROJECTS

SL Temps - Centralized HR Information System

- Planned and architected a centralized HR Information System from scratch, designing the full relational and NoSQL database structure to support five role-based portals — Employee, Supervisor, HR, Accounting, and IT Help Desk.
- Designed end-to-end UI/UX across all five portals using Figma, ensuring consistent, intuitive experience for diverse user roles including employees, supervisors, HR staff, accountants, and IT support.
- Developed the front-end for all portals using ReactJS and Tailwind CSS, implementing core HR workflows including attendance tracking, leave management, payroll processing, and IT ticketing integrated.

HueView - CNN-Based Skin Tone and Undertone Classification System

- Built the backend API using FastAPI and Python, developing endpoints to handle image uploads, run the skin tone inference pipeline, and return classification results in JSON format.
- Trained an EfficientNetB0-based CNN model for skin tone and undertone classification using Global RGB Feature Extraction, achieving 90.97% accuracy across six skin tone categories on a 2,801-image test set.

Bloom & Beat – A Two-Player AI Garden Strategy Game

- Designed the game interface and system architecture for a two-player AI strategy game built on an 8x8 grid, incorporating Minimax, BFS, and A* pathfinding algorithms to drive intelligent gameplay mechanics.
- Executed end-to-end testing to validate AI decision-making, cascading spread events, and bee pathfinding behavior, ensuring gameplay accuracy and a smooth user experience.

FlutterShutter - Professional Photography Booking and Management System

- Designed and implemented the relational database schema for a full-stack photography booking system, supporting real-time availability tracking, appointment management, and payment processing for dual user roles.
- Developed core system modules using C# and the MVC architecture, enabling secure role-based authentication, package management, and automated scheduling conflict resolution.

iReportPH - Digital Police Blotter Reporting System

- Designed normalized relational database schemas using DBMS concept to manage police blotter and incident data with minimal redundancy.
- Create UI/UX wireframes and interfaces in figma to streamline digital reporting workflows for non-technical users.

Synta – Mini Programming Language

- Designed and built the front-end interface of a syntax analyzer for Synta, a high-level hybrid programming language, using ReactJS and Tailwind CSS.
- Created a clean and structured UI that visually presents syntax analysis results, improving readability and accessibility of compiler output for both technical and non-technical users.

Pattern-Based Email Security - NLP-Enhanced DFA/NFA Malicious Email Detection System

- Developed the front-end interface using ReactJS and Tailwind CSS, visualizing DFA/NFA state transitions and pattern match highlights to improve transparency and interpretability of the detection pipeline.
- Conducted end-to-end testing and contributed to system documentation, covering automata construction, dataset preprocessing, and comparative analysis between pattern-based and ML-based detection methods.

eSchedule - Laboratory Room Management System

- Contributed to the design and planning of greedy and heuristic scheduling algorithms to automate laboratory room allocation, reducing scheduling complexity for multi-room environments.
- Documented system architecture and conducted end-to-end testing to validate algorithm outputs against real-world constraints, ensuring scheduling accuracy and reliability.

SKILLS

- **Languages:** HTML, Tailwind Css, JavaScript, C#, Python
- **Frameworks & Libraries:** ReactJS, FastAPI, TensorFlow
- **Databases:** MySQL, NoSQL
- **AI / ML:** CNN-based deep learning (EfficientNetB0).
- **Tools & Platforms:** Git, GitHub, SQL Server Management Studio (SSMS)
- **UI/UX:** Figma
- **Soft Skills:** Detail-oriented, analytical problem-solver, adaptable, and proactive.
